

ANNEX B – COVID-19 PROCEDURES (Integral part of the Transport Contract School Year 2021-2022)

Dear Parents,

Given the return to class of pupils we would like to remind you our prevention safety measures procedures:

1. to take the temperature before getting on the bus
2. to sanitize hands before getting on the bus
3. obligation to correctly wear the facemask during the time on the bus
4. real-time recording of the seating position of pupils
5. daily sanitation of the bus

Are considered direct contacts:

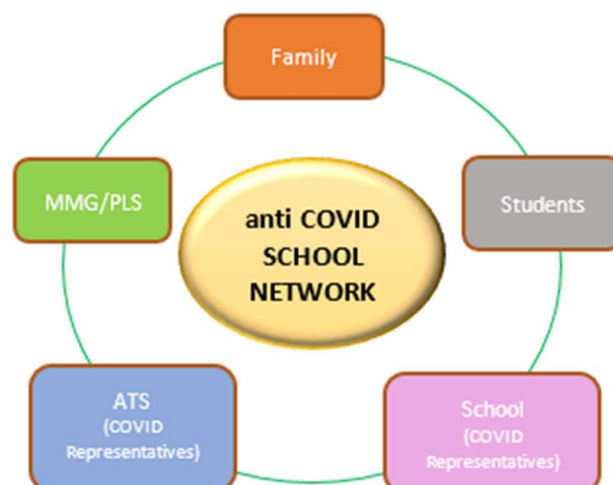

1. pupils sitting on the right and left side on the positive student;
2. pupils travelling on the bus for more than 15 minutes;
3. pupils sitting in the four seats in front and behind of both rows on the left and on the right of the positive student;
4. IN ANY CASE all pupils under the age of six who are NOT wearing a facemask.

ATS has decided that it is necessary to report only these contacts because our prevention procedures already in place ensure the safety of all the other passengers.

ATS has given us access to the Emercovid portal to insert the direct contacts, who will directly receive a notification from ATS Insubria.

In order to insert the data in the portal it is necessary to have the fiscal code of your children (in case you do not have a fiscal code you should give us the date and place of birth of you children).

We will insert the contacts in the ATS portal as soon as we will receive the information from the parents of the student positive to COVID-19. In case it will not be possible to insert the data right away in the ATS portal, the direct contacts will be immediately contacted by email or phone.

F.A.Q.

When shouldn't I send my child to school?

- When he/she is waiting the result of any type of diagnostic test or swab
- When I receive the positive result of antigenic test or molecular throat-nose swab
- When he/she has a body temperature of 37.5°C or higher
- When he/she has symptoms such as fever, cough, headache, gastrointestinal symptoms (nausea, vomit, diarrhea), sore throat, dyspnea, myalgia, nasal congestion
- In case of returning from countries or zones considered at risk, pursuant to the regulations in force (www.ats-insubria.it/aree-tematiche/covid-19/rientro-dall-estero-e-frontalieri)

When should I inform the school that my child resulted positive to a diagnostic test?

- Immediately

As soon as the positivity of a molecular or antigenic nasal throat swab is verified

Who should I inform within the school community?

- The Cooperativa Trasporti of the school covid_trasporti@eursc.onmicrosoft.com and the Medical Centre of the school VAR-MEDCENTRE@eursc.eu

It is important to inform both services because the contact tracing follows different cluster identification principles and separate procedures.

Without a written communication from the family, we cannot activate the protocols to manage positive cases.

ATS does require the school to communicated suspect cases, but only the verified once.

Why it is important and crucial to immediately inform the school that my child is resulted positive?

- Because the respect for others is crucial to prevent and contain the virus.

Only in this way it is possible to preserve the community we live, study and work in.

If give we inform the school (Medical Centre, Direction and Cooperativa Trasporti) as soon as we receive the confirmation of a positive test the people in charge can immediately activate and carry out the protocols in force to further sanitize the places and identify close contacts.

Which are the consequences of a lacking or late communication?

- The spread of the virus to the people around us has social and economic consequences for the families of other pupils and for the organization of the school which is forced to make extraordinary efforts to keep the transportations and environments safe.
