SCHOOL MEDICAL EXAMINATION

Every year, when possible, European schools offer all students a medical examination to monitor their health and development at the Medical Service.

The check-up consists of two parts:

- o A screening check carried out by the school nurse, including monitoring of: weight, height, eyesight, hearing, color recognition, blood pressure, and heart rate
- o A consultation with our school doctor, Dr. Paola Patruno, to monitor the physical and pubertal development of students and prevent any illnesses with a focus on prevention and early diagnosis.

For some grades (P2, P4, S3, S4, and S6), the usual screening of parameters will be carried out, and instead of a medical examination, various age-related health education topics will be discussed.

Families who do not wish to use this service are kindly requested to notify and send the medical service an annual health check-up carried out by their family doctor. You can find the document on the school website, in the medical service section.
